

Which has the right head-height for its body: the robot or the man?

Draw the shoulder, arm, and hand around this robotic skeleton arm. If this was made to look just like a human body-builder's arm, how many bulges of muscles would there be? See if you can draw the muscular arm like it should look. (the hand can be like a mitten).

An inventor has made a new robot, and she wants it to have human proportions. Which hand guidelines should she use for the fingers? Draw some robot fingers for her.

She also wants the eyes to be in the same place on the head as human eyes. Draw them where they should go on her robot's head.
